

INSTRUCTIONS TO THE CANDIDATES

- ❖ Do not use sketch pens/ high –lighter pens/ color pencils etc., in underlining / highlighting certain points in the answer or while drawing sketches etc.,
- ❖ Check the Answer booklet thoroughly. The defective answer booklet may be returned to the invigilator before starting the examination.
- ❖ Ensure that the OMR Barcode sheet is properly secured to the answer booklet.
- ❖ Do not write on or tamper the Barcode. If you do so, your booklet will not be evaluated.
- ❖ The candidate is prohibited from writing his/ her NAME / ADDRESS/ PHONE NUMBER / EMAIL ID / Religion or any other matter on any part of the answer booklet / drawing sheet/ graph sheet/ addressing the examiner in any manner whatsoever in the answer booklet. The candidate is not supposed to tear a page in full or part of the booklet.

Non-adherence with this instruction shall result in candidate being booked under malpractice.

- ❖ Answer should be written on both sides of the paper. Candidate should write in all 25 lines in each page. It is not necessary to begin each answer in a fresh page.
- ❖ Candidate should write only question number in the margin.
- ❖ Candidate should return the answer booklet to the invigilator before leaving the examination hall.
- ❖ **ADDITIONAL SUPPLEMENT OF ANSWER SHEETS WILL NOT BE ISSUED.**

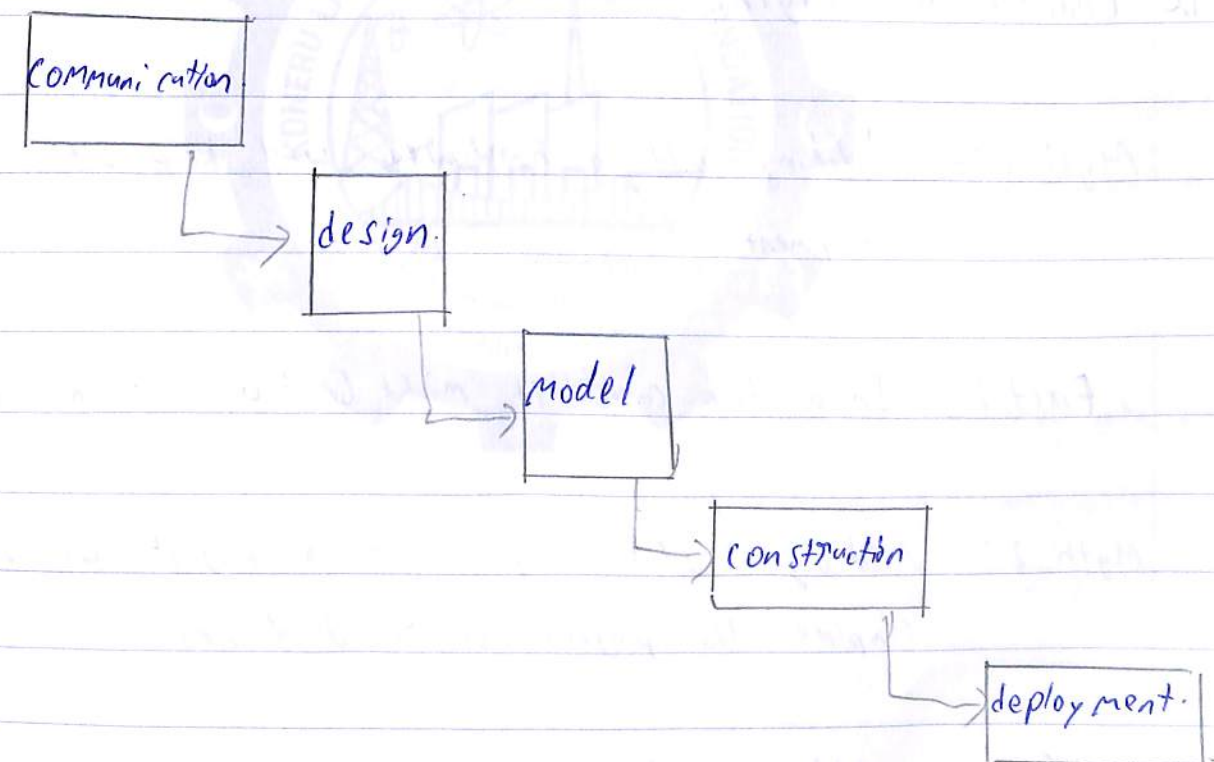

INSTRUCTIONS TO THE EXAMINERS

- ❖ Invigilators should ensure that the above instructions are strictly followed by the candidates.
- ❖ After verifying the particulars on the OMR sheet, invigilator should sign in the box specified.
- ❖ Do not crumple or cut the sides of the sheets.
- ❖ Do not write, mark or damage the timing tracks or Barcode.

1

1.A The Role of a software engineer in a development team is to collect and gather the clients requirements; design / model them and code their product so it can be deployed and delivered to them

1.B waterfall model.

Advantages:-

- Used in small scale business
- With a clear description it can be implemented

Disadvantages:-

- Once you move forward, there is no going back to change it

1.C Practitioner Myths.

Myth 1:- Adding additional hardware will help with software development

Fact 1:- In a few cases it might be true but not always.

Myth 2:- Adding additional peers to a project will help to complete the project before deadlines

Fact 2:- Adding additional peers will in fact delay the project as they need time to adapt to the project

Myth 3:- Documentation for the project is unnecessary and will delay the project.

Fact 3:- The purpose of a project is so that it can be used by the community. Not everyone knows, the documentation is the guide of how the project works.

1.D Business requirements / system requirements.

Business requirements:- Are the requirements which are needed from the Business's point of view. Like for outsourcing, reach, marketing, profitting.

System requirements:- They are the requirements which are needed from the system's point of view, like hardware systems, frontend, backend.

1.E. Verification.

1.) At the beginning we can verify the requirements of the customers.

2.) Verification is to getting known of the customers requirements.

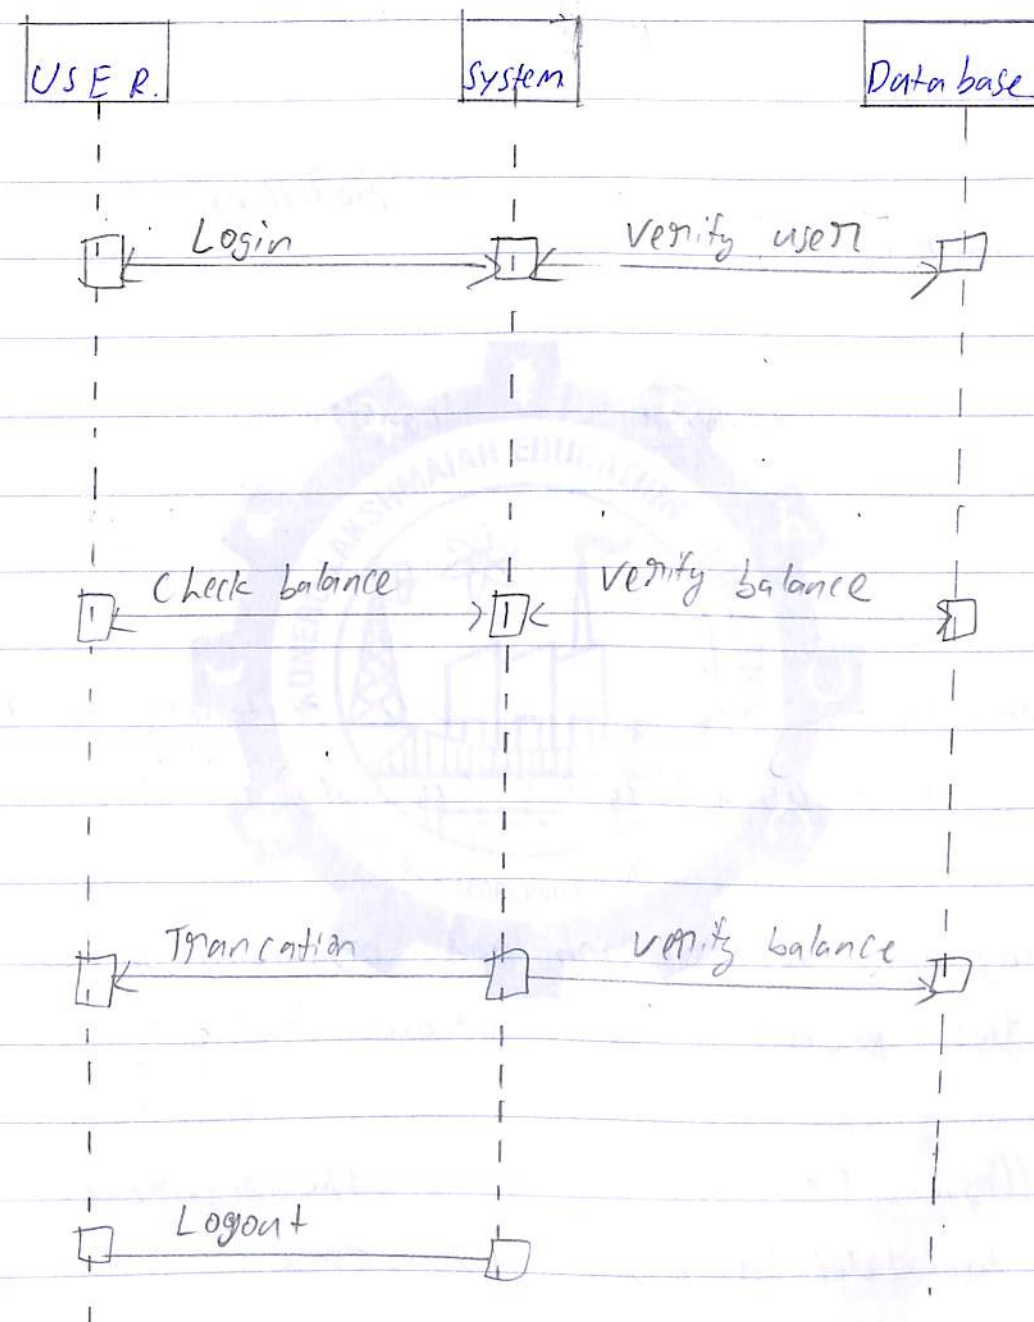

Validation.

1.) By validating the requirements the customer is satisfied of his demands.

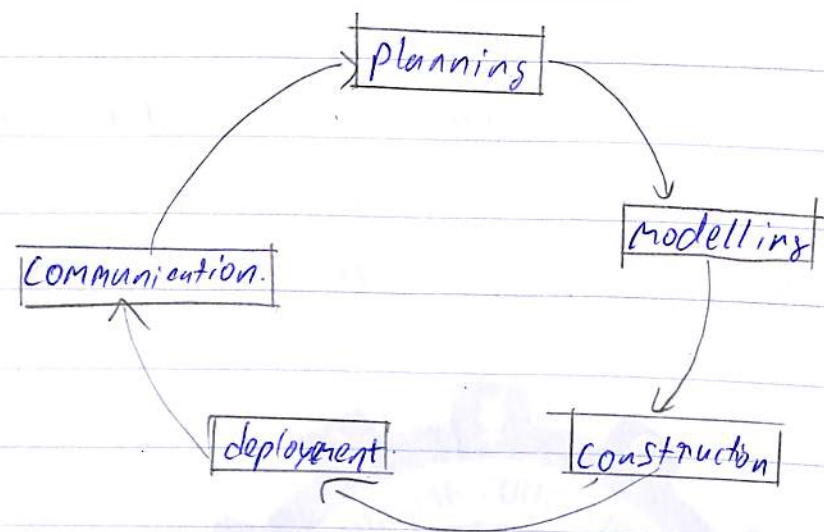

2.) Validation is getting the customer to know of their requirements of which we will continue.

2

2.A.

2.B

Communication: communication with customers to know what they are looking for, mostly their requirements

Planning: Work division and organising on about how this project is to be set out.

Modelling: First implementation of the requirements and ideas to model the project into existence

Construction: After many iterations if the model is finalized and it satisfied all the requirements then the final model is constructing

Deployment: The final model is constructed with all the documentation and is given to the client.

2.C Requirement Engineering.

It is the way of the methods to know about the client's requirement.

This is required because it is based on the requirements that the product is delivered

2.D

Requirement from different stakeholders.

While collection there will sometimes be conflicts within the system and the client.

I would negotiate with

I would negotiate with the client to understand them better.

3

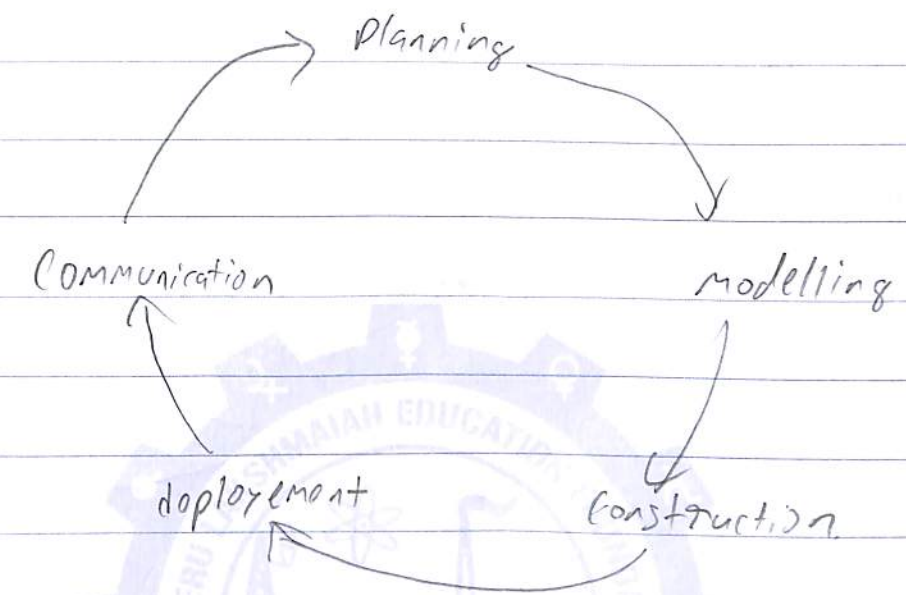

3.A. Umbrella activity framework.

The Umbrella activity is mainly about teaching a software development team how to handle change, risk, in software engineering.

With Umbrella activity framework there are many like:

- * Risk management
- * Optimization.
- * Project Handling
- * Team Spirit.
- * Adaptability code.

3.B

I would apply prototype model for the new social media platform.

I suggest it would be helpful as there is always another iteration for the bugs to be resolved.

With each deployment the feedback is the communication phase, telling us the pros and cons of the project.
