A] Bitmap in colour theory.

In colour theory Bitmap is used for saving images. It is an image file extension. It helps in preserving the image's quality without data loss.

B] Typography in UX design.

Typography is the design of text to make it creative, colourful and still eligible to read. Typography can be used to create more depth to the text and make it more appealing.

C] Tree Testing.

- 1. Tree Testing is a type of testing of the many testings.
- 1. It is used for ~~app~~ testing of the user interface.

It checks all the available links and see if it is good or not for users. We again take feedback from this test and improve our website.

D] Asset Panel.

'Asset Panel' is the panel where all the Assets consists.
• The Asset Panel consists all necessary tools for illustrations like Pen, Fill, Eraser etc.

E] Micro - Interactions.

Micro-Interactions are the small interactions in the page which make it more interactive instead of a static page. Example ~~that~~ when you click a button, the button rises up. These are small details that are ~~subconsciously~~ noticed and makes the interface more active and interactive.

F] Voice-Interactions

Voice-Interactions are interactions in which voice is involved. Like in a game when a user interacts with an NPC, the NPC has ~~its~~ their voice lines which it narrates. VUI can make the whole experience more interactive and nice.

2

A] Concept of Visual Design

UI → User Interface.

The concept of visual design is for the user interface to be interactive and nice.

No one would prefer a bad UI with bad visual design.

The visual design is so that the users when interacting with the user interface, they like it and prefer it. For that we have many things to take account for like colour theory, Logo creation, Contrast, Saturation, Hue, Accessibility.

From what we see (UI) to what we experience (UX) it is all under visual design. It helps so that the user is pleased with what they see and interact with.

B

A web form for airline management system for customer booking

Profile 

KLU AIRLINES

Passenger Name:

Passenger AGE:

Phone Number:

Gender: ☒ Male ☐ Female

D) Logo creation.

Concept

Concept

• Adapt: First Figure out what the idea for the logo is about.
Is it a business? or a Tech company?

• Research: Gather all information about how the logo should be made as per client.

• Ideate: Find inspiration for your logo, try to get a few rough sketches

• Prototype: Try multiple ways for the logo to be represented, communicate with your client and get Feedback

• Sketch: After finalizing a design draw that design in various ways and ways your clients have requested.

• Logo: At last, add coloring to the logo according to the brand. and your logo is ready.

Color Theory

3

A) Components of Forms.

A form can contain a variety of things

- Text Input
- Password Input
- Email Input
- Check boxes
- Drop downs.
- Radio buttons.
- sliders
- Submit buttons
- Labels

These are the various of many types of components.

Each one of these can be used to take user input. Each on its own supportive way.

KLU BANK

First name:

Last name:

Phone number:

Adhaar card:

Pan Id:

Gender: ☒ Male ☐ Female

Occupation: ☒ Student ☐ Job

Savings: ☒

B] Icon Representation.

There comes a lot when it comes to Icon. An Icon is the visual representation of a brand.

• many factors lie in this like hue, saturation contrast etc

• As Icon is the visual representation of the brand, its non verbal communication must be strong and be impactful.

6

A] UX Designer VS Product Designer.

• UX Designer.

→ The role of UX Designer is to make the given UI actually functional.

→ UX designer are typically like the Front-end developers.

→ Their function is to make the UI as it is. They don't bother about the design, but more on the experience of the user for their time spent on the webpage.

• Product Designer

→ The role of Product Designer is more complex. It is not a single role as they need to take care of UI, UX and marketing.

→ Product Designer's work is more loaded compared to UX designer. As he himself needs to make the UI, UX and finally market the product so other will use it.

B] Repeat Grids in Adobe XD.

- Adobe XD is an application used for designing. It contains various tools etc.
- Adobe XD can also be used by beginners as it has helpful interface for beginners as easy for designing.
- Repeat Grids are imaginary lines on canvas so that we can align ^{multiple} text/logo/etc design properly without any errors.
- Their role in speeding up the creation of repetitive layouts is helpful because we can only take care at the first ^{one} and then it is repeated again properly in Grids.
- Scenarios for Amazon where Repeat Grids are most effective is in Search, we can search a product as Amazon will give a proper layout of all the items available.
